Professional Summary

Senior Software Engineer with nearly 4 years of experience building enterprise-scale platforms across Healthcare, Telemedicine, Event Services, E-commerce, and Booking Platforms, including systems serving **11M+ global learners**, **3.5M+ annual patient encounters**, and **100M+ indexed clinical documents**. Strong expertise in React, TypeScript, Node.js, AWS S3 bucket, and Azure Blob Storage. Architected and developed a secure Document Management System with file upload capabilities, dynamic folder hierarchy management, audit trails, and Azure Blob Storage integration. Implemented automated malware scanning and file validation using Microsoft Defender, ensuring only verified and secure documents were uploaded and stored in production environments. and owning production releases end-to-end in regulated, high-availability environments. Experienced collaborating across Product, Platform, QA, and Engineering organizations to deliver large-scale production systems

Technical Skills

Programming Languages: JavaScript, TypeScript, SQL

Frontend Frameworks and Libraries: React, Next.js, Redux, MUI (Material UI), Tailwind, HTML/CSS

Backend Frameworks and APIs: Node.js, Express.js, REST APIs

Architecture Patterns: Micro Frontends (MFE), Backend-for-Frontend (BFF), Distributed Systems, System Integration Design

Cloud Platforms: AWS (S3), Microsoft Azure (App Service, Azure DevOps, Azure Blob Storage)

CI/CD and Release Management: GitLab CI, Azure DevOps Pipelines

Databases and Storage: MySQL, MongoDB, Redis

PROFESSIONAL EXPERIENCE

InterScripts Software Pvt Ltd

Software Development Engineer II

Bytepad, Healthcare Information Platform

Aug 2025 – Present

Hyderabad, India

- Owned development of a healthcare platform supporting **5+ hospitals**, **250+ clinical sites**, and **3.5M+ annual patient encounters** across patient onboarding, clinical encounters, radiology, and laboratory modules.
- Architected a secure File Cabinet system with dynamic folder hierarchy management, document uploads, malware scanning, and **Azure Blob Storage** integration, Automated file validation using Microsoft Defender, ensuring only safe documents were stored in production while maintaining audit trails
- Designed and developed RESTful APIs for handling PDF, TIF, and RTF document formats, enabling secure healthcare data exchange through SFTP-based integrations across multiple clinical systems.
- Delivered multi-environment CI/CD deployments via Azure App Service and Azure DevOps, enabling reliable releases across multiple healthcare client environments and integrated legacy systems
- Developed patient insurance statement generation and download functionality, enabling automated creation of billing and insurance documents in PDF format for improved operational efficiency and patient accessibility.

Kompalli Data Solutions Pvt Ltd

Software Engineer

Event Services Booking Platform

April 2024 – Jul 2025

Hyderabad, India

- Developed and maintained scalable full-stack web applications across event management, e-commerce, and booking domains using Node.js, Express.js, React.js, Material UI (MUI), and AWS S3
- Created and consumed RESTful APIs, implemented authentication/authorization, and integrated databases to support business-critical functionalities.
- Designed responsive and reusable UI components with React.js and Material UI, improving application usability and maintainability.

- Enhanced application performance, security, and scalability through optimization and best coding practices.
- Worked in Agile environments, collaborating with cross-functional teams to deliver scalable, client-focused solutions.
- Integrated AWS S3 buckets for secure file storage, retrieval, and media asset management, improving application scalability and reliability.
- Implemented Cron Jobs to automate email notifications, reminders, booking confirmations, and scheduled business workflows.

eVaidya Pvt Ltd

Junior Software Developer

evaidya - Telemedicine & Online Consultation Platform

Feb 2022 – March 2024

Hyderabad, India

- Developed a telemedicine platform prototype enabling secure video consultations, patient registration, and access to Electronic Health Records (EHR).
- Designed and developed RESTful APIs to support patient management, appointment scheduling, clinical workflows, and secure healthcare data exchange.
- Implemented comprehensive doctor-facing modules for patient diagnosis, medication prescribing, medical report generation, treatment tracking, appointment management, and referral workflows.
- Enabled healthcare providers to create and manage electronic prescriptions (e-Prescriptions), improving treatment accuracy and patient care efficiency.
- Automated PDF prescription and medical report generation, with secure email delivery to patients for timely access to treatment information.
- Integrated AWS S3 for secure storage and retrieval of prescriptions, medical reports, and patient-related documents, ensuring scalable and reliable document management.
- Leveraged Socket.io for real-time communication between doctors and patients during virtual consultations.
- Developed scalable backend services using Node.js, Express.js, and MySQL, ensuring high performance and maintainability.

PROJECT HIGHLIGHTS

Bytepad | React, Node.js, MySQL, Azure AI Search, Azure DevOps Healthcare platform supporting 3.5M+ annual patient encounters with AI-powered semantic search across 100M+ clinical documents.

EventNeedz | React, TypeScript, Node.js, MySQL.

Developed a scalable event services marketplace platform connecting customers with vendors for weddings, corporate events, parties, and special occasions.

evaidya | Node.js, React, TypeScript, MySQL, Socket.io

Developed a telemedicine platform enabling patients to connect with healthcare providers through secure online consultations and appointment scheduling.

EDUCATION

B.Com in Computer Application – **Arora College**

2014 - 2019

Karimnagar, Telangana

CERTIFICATIONS

Full Stack Development Certification (DDU-GKY)

Apr 2021 – Nov 2021

Hyderabad, Telangana
